

Python Research Workflow Lab

Today's Workflow Lab

- Today is not a lecture and not a test of memorization.
- Goal is to work directly in Colab

Our Mini Research Scenario

- Imagine we are exploring: **How do users describe their TikTok experience?**
- We have:
 - User comments
 - Platform-use records
 - Short observation notes
 - Engagement information
- Today we will **organize and inspect**, not analyze.

How Today's Lab Works

- Each group (4-5 per group) receives **two activity**
- Work with your team in one Colab notebook (15 mins)
- Use AI when helpful
- Record what your team tried and verified
- Every team shares their screen
- Learn from eight different problems
- Feel free to complete the Challenge Activity at the end if you like!
- Solutions posted after class

AI Is a Coding Partner

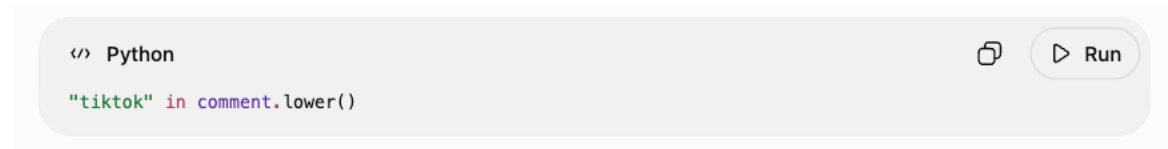

Ask AI to:

- Explain
- Hint
- Debug
- Review
- Simplify
- Suggest a test

But ask yourself:

- Do I understand it?
- Does it answer my task?
- Did I test it?

One New Tool Today: in

- Checks membership
- Returns True or False
- Works naturally with if (you will find out how in the lab activity!)
